

PROTHOM PAL

Free-to-Play Mobile Game Designer | Systems, Progression, Economy & Live Retention
palprothom21@gmail.com | linkedin.com/in/prothom-pal | tkgluk.itch.io | Portfolio: prothompal.github.io

Free-to-play mobile game designer with over two years shipping live titles end to end. I design systems, progression and economy, then tune them against live player data: reading funnels level by level, finding where players stop, and rebuilding the pieces that lose them. Three shipped titles, including one where build over build retuning took Day-1 retention past its target. Looking to bring that loop to a mature live PvP title like Golf Clash.

EXPERIENCE

Rendered Ideas

Game Designer L-1

Trainee Game Designer

Free-to-Play Mobile

7 months

1 year

- **Took a live free-to-play title past its Day-1 retention target** across four builds by scoping each build to a single question, reading the level by level funnel, and retuning the levels where players were stalling.
- **Found and fixed three separate difficulty walls**, including one reintroduced by an unrelated upstream tuning change, which led me to re-measure the whole early game every build rather than only what I had edited.
- **Ruled out a performance theory with data.** An onboarding drop looked like a load time problem; session telemetry showed no correlation with drop-off, which redirected a build's work back to level tuning.
- **Designed the reward pacing and soft currency economy** for a live free-to-play title: a three act reward cadence, plus a deliberately short list of sources and sinks, including daily login and opt-in rewarded ad bonuses, so players could reason about spending.
- **Sole designer on a six person team** for a free-to-play collection game, owning the loop, economy, UX and analytics event specs while a developer implemented to my parameters.
- **Designed a six tier merge and progression system** that turned duplicate pulls from a disappointment into progression currency, a core retention lever in collection driven free-to-play games.
- **Owned level and encounter design** for a mobile brawler, including the layout kit, the enemy roster, and the tuning ranges for a dynamic difficulty system that adapts per player across a rolling window of recent levels.
- **Wrote design documentation and tuning sheets**, and worked daily with engineering and art through production and live iteration.

Codex2D

Game Designer Developer

Unity

10 months

- Designed and built gameplay systems in Unity, taking features from spec through to working build.
- Prototyped mechanics for evaluation, which built the habit of testing a design in code before committing to it on paper.

Ramo Studios

Game Developer Intern

Unity

3 months

- Supported feature implementation and gameplay bug fixing on an active production project.

SHIPPED TITLES

My Cooking Story

Free-to-Play Mobile, Google Play | Game Designer

Tycoon time management. Owned core gameplay, progression and economy from concept through production. Build over build funnel analysis and level retuning carried Day-1 retention past its internal target, with most live markets clearing it independently.

Brainrot Game

Free-to-Play Mobile & TV, Amazon Appstore | Sole Game Designer

Free-to-play creature collection. Designed the core loop, tier and merge progression, timing based combat, healing and theft systems, and the full currency economy, within a strict performance budget for low end devices. Day-1 and Day-7 retention both improved across the iteration cycle.

Goon Fight

Free-to-Play Mobile, Google Play | Level Designer

Mobile 2D brawler with a fixed camera. Built room layouts from a three piece construction kit, designed the enemy roster across four combat ranges, and shaped wave placement using visual weight and threat priority. Set the tuning ranges for the game's dynamic difficulty system.

SKILLS

GAME DESIGN	Systems Design · Progression · Economy & Currency Balancing · Reward Pacing · Live Ops · Level & Encounter Design · Content Design · UX · GDD Authoring
DATA	Funnel Analysis · Retention & Cohort Reading · Game Analytics · A/B and Build Over Build Testing · Dynamic Difficulty Tuning · Analytics Event Specification
TECHNICAL	Unity · C# · Rapid Prototyping · Game Data Analysis · Android Studio · Performance Aware Design
TOOLS	Google Sheets (tuning models) · Google Docs · Jira · Photoshop · Git
PLATFORMS	Free-to-Play Mobile · Google Play · Android · Amazon Appstore · Low end device constraints
